The Schubert Theorem

CEPAGE 100% Shiraz

REGION Barossa Valley

TASTING NOTE

Sourced from various sections of the Schubert Vineyard -
Roennfeldt Road, Marananga
Planted on own roots between 1994 & 1999 (12ft x 8ft spacing)

The soils are deep red/brown earths with eroded protrusions of
crystalline quartz - ranging between 272-296m above sea level.

The Schubert Theorem lies within a branch of mathematics known as
'knot theory'. It states that any knot can be uniquely decomposed as
the connected sum of prime knots. Aptly named, this wine
deconstructs the Schubert family vineyard into its distinct sections,
taking the finest elements of each and re-assembling to connect and
enhance their strengths.
